TCHECOSLOVAQUIE

PRAHA (Prague).

Université de Charles

(1926)

(Universita Karlova).

Fondée en 1348. Nombre d'étudiants (1925-1926) : 8.146.

Budget de l'Université (1926) : 17.841.01 Kc.

Recteur : **K. Petr.** — Directeur du Bureau : **J. Cech.**

Fondée le 7 avril 1348 par Charles, roi de Bohême; pendant 200 ans, l'Université de Prague reste tchèque. Puis en 1653 l'empereur Ferdinand III réunit les débris de l'Université au Collège des Jésuites de Prague, d'où la dénomination ultérieure : « Universitas Carolo-Ferdinandea ». Les Allemands y sont les maîtres. Cet état de choses dure jusqu'au 28 février 1882 où, grâce à l'importance toujours croissante de la tchèque, l'Université a été divisée en deux : l'Université tchèque et l'Université allemande. Mais ce n'est que la dernière guerre qui a rendu entièrement l'Université de Prague à la nation pour laquelle son roi Charles l'avait fondée. Avec la restitution de ses droits l'Université a repris aussi son ancien nom : **Universitas Carolina.**

Perot pour les mouvements des gaz solaires; ces trois derniers instruments sont dans un même bâtiment qui est complété au sud par un cœlostat et au nord par un sidérostas polaire; un grand spectrohéliographe quadruple pour les trois couches de l'atmosphère; un spectro-enregistreur des vitesses, spécial; un grand spectrographe; ces trois derniers instruments sont dans un même grand bâtiment qui est complété au sud par un cœlostat et au nord par un grand sidérostas de Foucault dont le miroir plan a 1 m de diamètre. — *Pour les comètes et nébuleuses* : une table équatoriale sous cabane; un équatorial dit d'Eichens avec un viseur (O = 152 mm) et plusieurs chambres prismatiques; un équatorial sous coupole avec un viseur (O = 203 mm) et une chambre prismatique très lumineuse, constituée par un grand prisme objectif (O = 250 mm; F = 0 m. 75). — *Pour les astres faibles et les étoiles* : un grand télescope sous coupole, avec un miroir concave (O = 1000 mm; F = 3 m); une grande lunette double sous coupole, longue de 16 m avec deux objectifs dont l'un, destiné à l'observation oculaire, a 830 mm de diamètre; l'autre de 600 mm, est organisé pour la photographie. — *Pour les recherches d'Astronomie physique en général*, un grand équatorial d'un type nouveau dit Table équatorial, qui peut porter des appareils très lourds (plus de 2.000 kgr.) ou très volumineux. — *Pour les études de physique pure* : un grand récepteur de T. S. F. sous cabane; un grand laboratoire de physique et de spectroscopie dans les communs du Château.

Travaux. — L'Observatoire poursuit l'étude physique des astres, de leur température, des couches successives qui les composent et surtout de leurs divers rayonnements. Il organise toutes les applications aux astres de l'analyse spectrale et des découvertes nouvelles de la physique. Il est, d'après la loi qui l'a fondé, consacré spécialement au Soleil; il relève journellement par la photographie les quatre couches superposées, distinguées jusqu'ici dans le Soleil et son atmosphère et, en particulier, la couche supérieure avec ses protubérances; il étudie aussi avec soin les astres qui ont un diamètre apparent, les planètes, comètes et nébuleuses et il est organisé for-

tement aussi pour les étoiles et les astres faibles. En particulier, il recherche dans les étoiles les couches superposées de leur atmosphère pour la comparaison avec le soleil.

L'Observatoire poursuit à la fois des recherches d'astronomie et de physique pure.

NOTE SUR LE CONSEIL INTERNATIONAL DE RECHERCHES.

La grande guerre, qui avait divisé le monde presque tout entier en deux groupes antagonistes a conduit les puissances de l'Entente à établir les relations scientifiques internationales sur de nouvelles bases. Jusqu'alors, les Associations scientifiques internationales étaient comme isolées les unes des autres; par exemple, l'Association géodésique internationale tenait ses réunions, dressait un programme etc. presque sans tenir compte de ce qui était fait dans les autres Associations, même dans celles dont le terrain était le plus voisin du sien, comme l'Association sismologique, etc.. Dans cet ensemble individualiste, l'Allemagne avait obtenu une prépondérance

injustifiée. La guerre a conduit les puissances groupées autour de l'Entente à former un ensemble homogène, et ainsi a été constitué le « Conseil international de Recherches », organe suprême susceptible d'étendre son action à toutes les connaissances où la coopération internationale est utile. Des réunions préparatoires, tenues à Londres d'abord, à Paris ensuite, en 1918, jetèrent les bases du nouvel organisme; et enfin une assemblée constitutive, tenue à Bruxelles en juillet 1919, l'a définitivement créé. Ce Conseil a deux organes : une *Assemblée plénière* et un *Conseil exécutif*. Chaque science forme une *Union internationale* dépendante du Conseil, mais jouissant d'une large autonomie : ainsi ont été constituées d'abord l'*Union astronomique*, puis un grand nombre d'autres (Mathématiques, Physique, Chimie, Géologie, Géographie, etc.). L'Union astronomique s'est divisée en Commissions dont le nombre actuel peut être augmenté à mesure des besoins, et la 31^e est celle de l'Heure, dont dépend le *Bureau international de l'Heure* indiqué ci-dessus.

PRAGUE (Bohême) (1925). — **Observatoire national.** — En 1751, les Jésuites fondèrent à Prague l'«*Observatorium Pragense*» astronomique. Après la suppression de l'ordre des Jésuites en 1773, l'Autriche en fit un Observatoire national autrichien portant le titre officiel «*Königliche*» et puis «*K. K. (kaiserliche-königliche) Sternwarte*» qui a été administré depuis 1883 par l'Université allemande de Prague.

Après 1918, cet observatoire avec sa bibliothèque et son riche musée (contenant entre autres aussi quelques instruments de Tycho Brahe) devint observatoire national tchécoslovaque. Les principaux instruments de la «*K. K. Sternwarte*» restèrent à la disposition de la «*Sternwarte der deutschen Universität*».

Le bâtiment de l'Observatoire, placé au centre de la ville, ne répondant plus aux exigences des travaux modernes, ces derniers se font provisoirement à l'Observatoire privé «*Zalov*» des frères Josef et Jan Frič à Ondřejov près de Prague (voir Ondřejov).

BIBLIOTHÈQUES ET ARCHIVES.

Il est rappelé que l'insertion n'a lieu qu'autant que le Questionnaire envoyé au Chef de service a été retourné.

Note. — Les *Annuaire*s des divers pays du monde décrivent un assez grand nombre de Bibliothèques qui ne figurent pas dans l'*Index Generalis*.

Les Bibliothèques que nous ne décrivons pas sont en général « en sommeil », faute de crédits ou par suite de la négligence de leurs conservateurs.

L'*Index Generalis* étant contraint de se limiter aux Bibliothèques les plus importantes et les plus vivantes, nous avons fait un choix aussi judicieux que possible.

Désormais, les insertions nouvelles ne seront plus faites d'office, comme par le passé; elles ne seront faites que sur demande des conservateurs.

De nombreux renseignements, arrivés pendant que l'*Index Generalis* 1927 était en cours d'impression, seront donnés dans l'édition prochaine.

THE « OPEN-ACCESS » SYSTEM

Or how to make the choosing of books in a Public Library easy and interesting.

To enable borrowers to choose their books with the least trouble both to themselves and the librarians, the system called the « Open-Access » system has been widely adopted in English and American Public Libraries. To prevent theft only readers enrolled on the register of the Library are allowed to the shelves.

At the entrance to the Lending Department a square counter is placed, and on each side of this is a small door, one for entrance and the other for exit. The borrower on showing his membership ticket, or if returning a book, is allowed to enter by the assistant inside the counter releasing the lock by his foot. The borrower cannot go out on the other side without showing his book for registration when the door is unlocked with the foot.

It is advisable to arrange the book cases so that the borrowers can be under observation from the counter. The books are classified according to the subject treated, and labels are placed above each tier stating the contents of the shelves below.

Fewer assistants can work the « Open Access » system, and much larger numbers of readers can be served as the fetching of each book to the reader is not required.

This system is very superior to the « Closed » system, as the books are much more used and do not stay for years on the shelves untouched. The Catalogue is as very poor guide to the choosing of books, as only by seeing and examining many books can the student make a wise selection.

LE SYSTÈME DU « LIBRE ACCÈS »

Comment rendre facile et intéressant le choix des Livres dans une Bibliothèque publique.

Pour permettre aux lecteurs de choisir les livres le plus facilement possible, tout en réduisant au minimum le travail des bibliothécaires, une large extension a été donnée au système du « Libre Accès » en Angleterre et aux Etats-Unis. En vue de parer aux risques du vol, seuls les lecteurs inscrits sur un registre spécial de la Bibliothèque sont autorisés au « Libre Accès ».

Un tambour, avec deux portes, l'une pour l'entrée l'autre pour la sortie, est placé à l'entrée de la salle où se trouvent les rayons. Toute personne désirant choisir elle-même un livre dans les rayons entre par le tambour, en montrant son permis d'accès; une fois le livre choisi, elle repasse par le tambour, où elle est immobilisée momentanément par le surveillant qui, de son pied, condamne la porte de sortie à l'aide d'un mécanisme spécial, jusqu'à ce qu'il ait noté le livre emprunté.

On dispose, autant que possible, les rayons de manière que le surveillant ait vue sur les emprunteurs. Les livres sont classés par matières; des écriteaux placés au-dessus de chaque rayon en indiquent le contenu.

Le système du « Libre Accès » ne nécessite qu'un nombre restreint d'employés, et un nombre beaucoup plus grand de lecteurs peut être servi, puisque les allées et venues des livres entre les rayons et les lecteurs sont supprimées.

Ce système est de beaucoup préférable au système vieilli qu'on pourrait appeler la « Clôture »: un usage intensif est fait des livres; il en est peu qui restent pendant des années immobiles sur les rayons. Les Catalogues sont des guides d'une insuffisance absolue; seul l'examen direct des livres permet aux personnes désireuses d'étudier sérieusement un sujet de choisir convenablement les ouvrages qui l'intéressent.

FRANCE et ALGÉRIE.

Il existe en France : 1° des **Archives départementales**, soumises à une réglementation uniforme; 2° des **Archives municipales ou communales**, le plus souvent laissées aux soins du Bibliothécaire municipal ou du Maire; bien qu'il soit difficile d'avoir des renseignements sur les Archives municipales, nous avons fait figurer les plus importants d'entre elles.

N. B.— Les *Registres paroissiaux* renferment souvent des documents intéressants, postérieurs pour la plupart au début du XVII^e siècle. Certaines *Etudes notariales* présentent de l'intérêt ainsi que certains *Fonds* appartenant à des particuliers, ordinairement représentants de l'aristocratie antérieure à la période révolutionnaire¹.
